

# REVEL

**REVEL IS MORE THAN ARCHITECTURE WITH AN OCEAN VIEW IT IS ARCHITECTURE  
WITH AN OCEAN VIEWPOINT**

*Design with Sense of Place is Environment for  
Inspiration and Entertainment*

**REVEL BEACH, Atlantic City, NJ** – Revel in Atlantic City stands at the edge of both the ocean and the future of the resort experience in the region. Revel incorporates the influence of the Boardwalk location’s dominant feature – the ocean – in shaping its physical presence and the guest experience.

Revel is designed to reflect and complement the natural environment around it; its glass hotel tower soars above the beachfront to give each of the 1,800 rooms a sweeping ocean view. The façade sparkles in the sun, captures snapshots of passing clouds, and surrounds guests with ocean views even if they turn away from the shoreline. The building’s podium is gracefully sculpted as if by the waves at its feet.

Atop the podium is The Sky Garden, an outdoor sanctuary that floats 114 feet above sea level, and fringes the curves of the building with a ribbon of landscaped space that flows into a pool area. A stand of pines and marsh grasses accented by seasonal plantings connects the ocean resort to its Northeast location, but also draws activity from the inside lobby out into the open air for social gatherings around one of the fire pits or a quiet moment as the sun rises over the Atlantic Ocean.

The influence of the ocean is felt throughout the interior of the resort with restaurants situated to maximize views, living room areas in the lobby warmed by natural light and walls that mirror the contour of the exterior curves. Social areas flow from inside to outside, outdoor to indoor spaces transition along thoughtful sightlines only separated for a moment by glass. The InOut pool literally flows from the indoor Revel lobby to the outdoor deck; sit inside or sit outside by the pool, swim between your choices. The emphasis at Revel is on design that simplifies the movement between activities for guests and never loses its connection to the ocean.

The design of this Revel property was conceptualized by Bernardo Fort-Brescia of Arquitectonica, a firm renown for its coastal architecture. Their work has helped to redefine South Beach and other entertainment destinations. Michael Prifti of BLT Architects directed its realization as architect of record, bringing their experience with the largest, most innovative casino developments of recent years. Theatrical designers Sceno Plus contributed to the reimagining of interior spaces including the casino. Sceno Plus has worked extensively in producing creatively challenging designs for Cirque du Soleil productions.
